

ZEISS SmartLife PRO

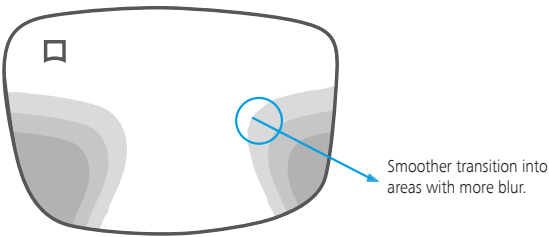

Progressive Lenses

ZEISS SmartLife PRO Progressive Lens Portfolio

Scientifically proven to enable peripheral vision in natural dynamic interaction.

ZEISS SmartLife PRO Progressive Lenses are designed to meet the vision needs of people with presbyopia with a connected and on-the-move lifestyle. The optical performance in the lens periphery is designed for frequent changes of head and eye position driven by how people interact with their handheld devices. This new design fingerprint provides a smoother transition into the lens periphery with less perceived blur to enable peripheral vision in natural dynamic interaction.

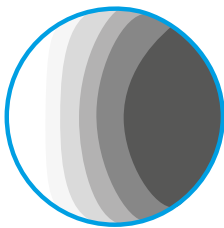

Smoother transitions

Smoother transition into areas with more blur compared to current ZEISS Precision Progressive lenses.

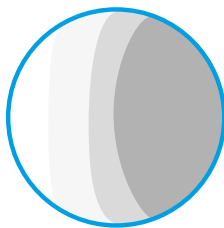

Lower blur level

Decreased blur level for intermediate to near distances compared to ZEISS Precision lenses.

Standard Progressive Lens

ZEISS SmartLife PRO Progressive Lens

Consumer benefits

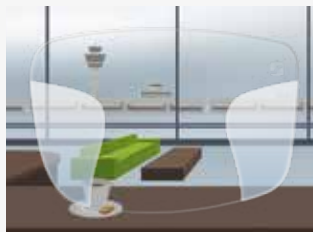

- High performance in dynamic vision in the periphery.
- 9 out of 10 rated the quality of vision with ZEISS SmartLife lenses positive.
- 4 out of 5 experienced smooth vision from near to far across all viewing zones.
- 8 of out 10 consumers adapted very fast to their new lenses, (within 1 day).

Optimised for the eyes + frame + face

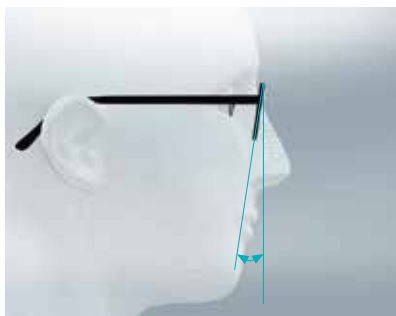

FaceFit™ Technology
Physiologically fitted to the wearer's face.

The uniqueness of the human body is one of the many factors influencing product development today, with an increasing demand for products that can adapt to our anatomy.

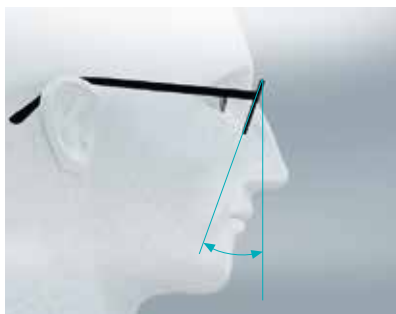

FaceFit™ Technology unlocks the full potential of 3D vision

FaceFit™ Technology optimises the vision zones based on data for the frame, for the position of the eyes and the fit of the frame on the nose and ears. With this precise information, lens zone sizes can be improved and the 3D vision potential fully utilised.

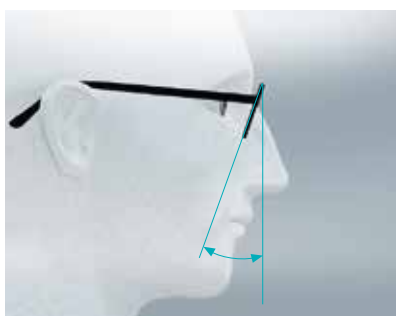

Standard lens design optimised for a face with standard position of wear parameters:

- Full vision experience when looking through the progressive lens without compromise

Standard lens design on a face with non-standard position of wear parameters:

- Compromised vision experience when looking through the progressive lens
- Three-dimensional vision potential cannot be utilised

Lens design with FaceFit™ Technology on a face with non standard position of wear parameters:

- Full vision experience without visual compromises when looking through the progressive lens, as the lens is optimised for the face
- Full utilisation of three-dimensional vision and enhanced distance perception for the wearer
